With the need to remain abreast of the many new and emerging advancements in the field of gastroenterology and the volume of patients continuing to increase as the population ages, the clinical gastroenterologist is more challenged than ever to deliver the best patient care in each situation they encounter. Research in a multitude of gastroenterology and hepatology areas progresses at a rapid pace. Advances in technology, diagnostic modalities, and therapeutic options have had a positive impact on the management of many GI diseases. Scientific education, based on critical foundational knowledge and clinical skills, the communication of practical methods for treatment, and the ability to integrate the newest tools in diagnosis with the latest therapeutic/treatment options, are key necessities for the GI clinician to deliver top-quality patient care. This course provides updates on a variety of gastroenterology and hepatology subjects including colon, IBD, small bowel and functional disorders, endoscopic emergencies, quality metrics in GI, obesity, pancreaticobiliary, liver disease, esophagus and stomach, liver disease, and motility. Expert faculty deliver scientific presentations on the latest topics in GI and liver clinical care. The program is designed primarily for clinicians in GI/hepatology, as well as physician assistants, nurse practitioners, and other advanced practice healthcare professionals interested in a scientifically sound approach to the management of GI and liver illnesses.
